PELI 9434B LED Light Head with Pole

The PELI **9434B LED light head with mast** is designed to replace the lighting assembly of a **RALS 9430B Generation 2** stand-alone floodlight.

It allows you to restore a system to service when the light head or mast is damaged, without having to replace the entire floodlight, including its battery and housing.

A replacement LED head for the RALS 9430B

The head incorporates **6 high-intensity, maintenance-free LEDs**. Two lighting levels allow the light output to be adjusted to the needs of the operation.

- **Low mode:** 1,000 lumens
- **High mode:** 2,000 lumens
- **Beam angle:** 90°
- **Rated LED lifespan:** 50,000 hours

The wide beam is suitable for illuminating a work area, an emergency response site, a construction site, or an environment temporarily lacking lighting.

Head and pole replacement set

This part number refers to a **set consisting of the black light head and its pole**. It is not the complete RALS 9430 system.

The battery, main unit, charger, and other components of the floodlight are therefore not included in this replacement part.

Compatibility with the RALS 9430B Generation 2

This 9434B version is designed for **the second-generation PELI RALS 9430B**. It is essential to verify the floodlight's generation before ordering, as lighting assemblies from different generations do not share the same part numbers.

Notably, the third-generation version uses a different part number for the head and mast assembly.

Technical Specifications

Specification	Value
Type	Replacement LED light head with mast
Compatibility	PELI RALS 9430B – Generation 2
Light source	6 high-intensity LEDs
Light output	1,000 lumens in low mode / 2,000 lumens in high mode
Beam angle	90°
LED lifespan	50,000 hours
Head dimensions	16.5 × 20 × 6.5 cm
Color	Black
Included components	LED head and pole
Usage	Replacement for the light head and pole of a PELI RALS 9430B Generation 2 standalone floodlight

FAQ – PELI 9434B LED Head

How do I know if this head is compatible with my 9430 floodlight?

Part number 9434B is designed for the **2nd-generation RALS 9430B**. Simply owning a 9430 floodlight is not enough. You must check its generation and the part number of the head currently installed before placing an order.

Can this part operate on its own?

No. This is a replacement part for the RALS 9430B system. It must be connected to a compatible base, which provides power and controls the lighting.

Can it replace a Generation 3 9434C head?

No. Different generations use different part numbers. A 9434B head should not be considered interchangeable with a 9434C without first verifying the specific generation of the projector.
