SAM SPLINT 91 cm immobilization splint

The aluminum deformable splint is an essential medical device designed to provide rapid, comfortable immobilization of limbs while adapting perfectly to the body's anatomical curves. Thanks to its flexibility and polyethylene foam, this splint provides secure support while guaranteeing optimum comfort. It is ideal for use in emergency situations or home care, treating a variety of injuries or fractures to the hand, wrist, arm, elbow, ankle and leg.

Features :

- **Construction material**: high-quality aluminum frame, covered with polyethylene foam for added comfort and safety.
- **Dimensions**: Length of 91 cm, enabling use for a wide range of injuries, whether affecting the upper or lower limbs.
- **Packaging**: Supplied on a roll for easy storage and convenient use.
- **Versatility**: Suitable for rapid immobilization of various body parts (hand, wrist, arm, elbow, ankle, leg).
- **Deformable**: Easy to shape and adjust as required, enabling better adaptation to limb curvatures.

Advantages :

- **Optimum adaptability**: The deformable splint adjusts perfectly to limb contours, providing effective, personalized immobilization.
- **Comfort**: The polyethylene foam covering the aluminum reduces the risk of irritation and improves comfort during immobilization.
- **Ease of use**: The 91 cm length and the fact that it comes on a roll mean it can be used quickly and adjusted easily, even in emergency situations.
- **Versatility**: Whether for fractures, sprains or other injuries, this splint can be used on almost any part of the body.
- **Mobility made easy**: The splint enables the user to maintain mobility while being effectively immobilized.

Application:

This deformable splint is an essential piece of medical equipment for healthcare professionals, but also for home use in emergencies. It is ideal for immobilizing limbs after an injury, fracture or sprain, providing immediate support prior to medical treatment. Thanks to its flexibility, it is also suitable for home care where rapid

intervention is required.

The Rapid Immobilization Deformable Splint is an optimal choice for anyone looking to secure a limb after an injury. With its aluminum structure, comfortable foam and ideal length, it guarantees fast, reliable immobilization while adapting to body curves. Practical and effective, it's the essential tool in any first-aid kit, both for professionals and for home use.
