Pressure sore simulator for nursing training

Pressure sore simulator for nursing training

This pressure sore simulator is an innovative training tool for healthcare professionals, particularly nurses and clinicians. Designed to teach assessment, wound care and dressing techniques, it enables trainees to practice on cases representative of the different stages of decubitus. Trainees can thus develop their skills in an educational and realistic setting, contributing to better pressure sore management on real patients.

Made from soft, realistic material, this simulator offers an immersive training experience, essential for nursing training and improving clinical practice.

Features:

- **Realistic material**: flexible structure for accurate nursing simulation.
- **Representation of decubitus stages**
  - **Stage 1**: Redness over the right greater trochanter with intact skin.
  - **Stage 2**: Partial loss of skin over the sacrum, with deterioration of the epidermis down to the dermis.
  - **Stage 3**: Complete loss of skin layers with subcutaneous necrosis on the left buttock.
  - **Stage 4**: Destruction of skin layers and deep structures (muscles, bones) on the left greater trochanter.

- **Accessories included**
  - Pressure sore simulator (dummy buttocks).
  - Practical carry bag.

Benefits:

1. **Practical, realistic training**: Improves trainees' skills in assessing, measuring and caring for wounds.
2. **Enhanced clinical preparation**: Enables better pressure sore management in real-life conditions, thanks to detailed training on the different stages of decubitus.
3. **High-quality material**: Ensures true-to-life training thanks to appropriate texture and flexibility.
4. **Versatility**: Suitable for both initial and advanced training of healthcare professionals.

Use

The pressure sore simulator is an essential teaching tool for nursing schools, clinical training centers and hospitals. It effectively prepares future caregivers to recognize the different stages of pressure sores, apply the appropriate treatments and practice the necessary dressing techniques.

Invest in this pressure sore simulator to ensure quality nursing training and improve wound care standards. Ideal for reinforcing clinical skills, this tool is a must-have for healthcare establishments wishing to offer comprehensive, realistic training to their teams.
