

Leak strap for fire hoses

Fire Hose Leak Strap - Secure your response quickly

The **Fire Hose Leak Strap** is an indispensable accessory for firefighters and fire-fighting professionals. Designed to temporarily seal leaks in pressurized hoses, it limits water loss and ensures optimum flow during firefighting operations. Easy to use and robust, this strap is an essential ally in emergency situations.

Features :

- **Material:** Heavy-duty technical fabric strap with robust tightening system
- **Compatibility:** Suitable for standard fire hoses (DN 70, DN 100, etc.)
- **Resistance:** Withstands high pressures for effective sealing
- **Dimensions:** Several sizes available to suit all requirements
- **How to use:** Quick installation thanks to ergonomic clamping mechanism

Advantages of a leakage strap :

- **Reduced water loss:** Prevents wastage and optimizes jet pressure
- **Increased safety:** Reduces the risk of leaks in the field
- **Ease of use:** Quick installation without special tools
- **Durability:** Made from materials resistant to extreme conditions

Use:

The leak strap is essential for ensuring the continuity of fire-fighting operations by limiting interruptions due to leaks. It helps maintain a constant flow of water, which is crucial to effectively extinguishing a fire. It is particularly useful for emergency services, industry and any organization equipped with fire hoses.

Opt for the **Fire Hose Leak Strap** and secure your operations with ease. Reliable, resistant and quick to install, it's an effective solution for managing leaks and optimizing your fire-fighting equipment. **Order now and improve the safety of your operations!**
