

## Articulated aluminium barrier key

### Standard aluminum articulated barrier key - Essential tool for hydrant operation

The **aluminum articulated standard hydrant** wrench is an indispensable piece of equipment for **operating hydrants** and their valves. Designed for versatile use, it can also be used **to open covers** and **lift manhole covers**, facilitating access to emergency equipment.

Made from **sturdy aluminum**, this barrier wrench is both **light and strong**, guaranteeing excellent durability even under demanding conditions. Its **31 mm female square end** ensures perfect compatibility with standard valves. Its **oscillating lever with 90° position** allows **clutter-free storage**, optimizing space and practicality in the field.

### Technical specifications

- **Material:** Aluminum
- **Length (L1):** 740 mm
- **Extended length (L2):** 1040 mm
- **Female square:** 31 mm
- **Swivel lever:** 90° position for optimized storage

Ideal for **fire protection professionals**, this **articulated barrier wrench** is a reliable, practical and ergonomic tool, facilitating all interventions on the fire network and underground access equipment.

Opt for a **high-performance, durable barrier wrench**, perfectly adapted to the requirements of firefighters and fire maintenance services.
