# Federal aluminum wrench for fire hydrant

## Federal aluminum fire hydrant wrench - professional maneuvering tool

### Essential key for opening and maintaining fire hydrants

This aluminum federal wrench is an essential tool for fire safety professionals. Designed to ensure fast, efficient operation of fire hydrants, it enables safe intervention during inspection, maintenance or emergency operations.

### A multifunctional tool for rapid intervention

Made of aluminum, this wrench combines lightness and sturdiness. It is equipped with a 30 mm female square, adapted to current standards, enabling several crucial operations:

- Opening and closing of fire hydrant covers
- Activation of the flow regulator via its special end cap
- Unlocking safety plugs

### Professional design for field use

Thanks to its optimized weight (approx. 1.75 kg), this wrench is easy to handle in the field. Its ergonomic shape ensures a good grip, even when wearing gloves. Its aluminum structure is highly resistant to corrosion, for extended outdoor life.

### Ideal for security services and local authorities

Whether for fire departments, road technicians or municipal services, this federal key is an essential piece of equipment for guaranteeing the accessibility and smooth operation of fire hydrants. Its compatibility with French standards makes it a trusted choice for fast, efficient intervention.
