Yellow and black traffic cones for industry

The yellow traffic cone with black base is specially designed to delimit and secure work, maintenance or traffic zones. Its 75 cm height guarantees optimum visibility, even from a distance, and helps to effectively prevent the risk of accidents.

Made from high-quality, flexible PVC, this marker cone is shockproof, weatherproof and UV-resistant. The black weighted base ensures perfect stability on all types of ground, indoors and out.

Its bright yellow color, in line with signage requirements, can be used to alert users and temporarily mark dangerous or off-limits areas.

Technical characteristics of the traffic cone

The cone is 75 cm high, with a heavy black base to ensure it stays in place. The body is made of resistant flexible PVC, with a high-visibility yellow tint. It can be used on its own or in combination with chains, ribbons and beaconing accessories.

Safety advantages and benefits

This traffic cone is recommended for temporary signage, managing pedestrian and vehicle flows, and demarcating sensitive areas in professional environments. It can also be used to visually mark ATEX zones at risk of explosive atmospheres in industry, to reinforce accident prevention and clearly indicate regulated perimeters.

Main applications

This traffic cone is recommended for temporary signage, managing pedestrian and vehicle flows, and demarcating sensitive areas in professional environments. It can also be used to visually mark ATEX zones at risk of explosive atmospheres in industry, to reinforce accident prevention and clearly indicate regulated perimeters.
