

Wall-mounted box for 6 kg extinguisher

Product features:

Reference: -
EAN13: -

Locking: Clé sous vitre, Goupille de sécurité

This wall-mounted box is designed to provide effective protection for your fire safety equipment, while offering quick access in the event of an emergency. This wall-mounted model accommodates a 6 kg extinguisher (water, powder or foam) with practical front loading.

Made from rotomolded polyethylene, it is impact, corrosion and weather resistant. Its reversible door opens to the left or right, depending on the installation, and incorporates an anti-UV treated polycarbonate window for direct visibility of the extinguisher.

The box is available in two versions: plastic toggle lock with pin, or under-glass key system. As an option, an audible alarm can be integrated at the manufacturing stage for even greater access security.

Thanks to its watertightness reinforced by a rubber gasket, this enclosure is perfectly suited to both indoor and outdoor environments, even in harsh conditions.

Technical specifications

Capacity: 6 kg extinguisher

Exterior dimensions: 700 x 320 x 255 mm

Weight: 4 kg

Material: rotomolded polyethylene

Closure: toggle with pin or key under glass

Window: UV-resistant polycarbonate

Seal: automotive rubber gasket

Wall-mounted, left/right reversible door

Factory-installed alarm option

Applications
