Hoolligan Paratech force tool

The **Paratech Hooligan Tool** is a **force and penetration tool** designed for forced entry in urban, industrial or emergency environments. Compact and lightweight, it is ideally suited to rapid interventions requiring power and maneuverability.

Its 2.5 cm-diameter, high-strength steel center bar is fitted with non-slip, serrated handles for a secure grip, even when wearing gloves. The forged alloy steel head and claw are heat-treated for maximum durability in the most extreme conditions.

The curved claw can be used to open or spread doors, windows, locks or panels. It is also designed for pulling nails, prying or forcing metal or wooden obstacles.

Technical specifications

- Length: 61 cm or 91 cm
- Weight: approx. 4.2 kg
- Steel bar with non-slip handle
- Forged head and claw, treated alloy steel
- Multifunction curved claw (lever, pull, spread)
- Designed for one person

Areas of use

The Hooligan Tool is used by firefighters, law enforcement, rescue and specialized intervention teams. It is ideal for forced entry, emergency clearance or rescue operations in constrained environments.
