

400-meter long-distance firefighter guide line

The **MMF Protection et Sécurité 400-meter guide line** is an **essential piece of equipment for long-distance operations**, particularly in confined or complex environments such as road or rail tunnels, high-rise buildings, underground parking lots, subways or deep cavities.

Designed for the safety of intervention teams (firefighters, specialized rescue teams, civil protection), this flexible guide line is packaged on an **exclusive aluminum reel**, equipped with an **integrated brake** and a **precise rope guidance** system.

The **Ø4 mm halyard-type** rope, with a **450°C-resistant aramid core**, guarantees **lightness, high mechanical strength (350 kg)** and **fire resistance**. **Reflective markers every 20 m** ensure rapid visual control of progress, even in smoky or poorly lit environments.

Technical specifications

- Total length: 400 meters
- Rope: Ø4 mm halyard - aramid core (fire-resistant, 450°C)
- Tensile strength: 350 kg
- Markers: yellow silicone nodules, reflective every 20 m
- Total weight: 5.6 kg
- Finish
 - 1 silicone tip for carabiner
 - 1 carabiner for attachment to reel
- Presentation: aluminium reel with integrated brake and guide
- Advantages: flexible, unbreakable, highly tactile, dimensionally stable, visible

Areas of use

Especially suited to **firefighters**, technical rescue teams and long-distance reconnaissance units. Recommended for use in :

- Road and rail tunnels

- High-rise buildings
- Underground parking lots
- Subway networks
- Deep cavities or complex galleries
