

## Manikin basic care adult male Simon

The **manikin Simon** is a **basic nursing simulator**, representing a life-size adult male patient. It has been specially designed for the initial training of student nurses, orderlies and healthcare professionals wishing to develop their practical skills in a safe teaching environment.

Thanks to its **movable joints** (head, arms, legs, ankles), Simon enables realistic handling during **mobilization** exercises, **bed bathing**, **hygiene care**, **dressing**, **applying bandages** or **installing medical devices**. Its masculine morphology provides the anatomical diversity needed to learn individualized patient care.

The skin surface is washable and resistant, enabling repeated use in intensive training sessions.

---

### Technical specifications
