

## Firefighter's axe 90 cm

### An intervention tool designed for firefighters

This **fire axe** is specially designed for **forcible entry** operations and **targeted destruction** during emergency interventions. Its profile makes it easy to cut through **window frames, door frames, wood or PVC uprights** in disaster-stricken, smoke-filled or rapidly evacuating buildings.

Its robust design, with a **forged blade mounted on a riveted wooden handle**, guarantees strength and longevity, even under intensive use on building sites or in urban environments.

### Technical specifications

#### Dimensions and materials

- **Overall length:** 90 cm
- **Head width:** 40 cm
- **Weight:** 2.2 kg
- **Handle:** hardwood with riveted keyway
- **Application:** frame removal, partial destruction, forced ventilation

### Areas of use

#### Indispensable tool for firefighting

The axe is suitable for use by **firefighters, emergency crews, rescue services** and civil protection personnel. It is used for :

- Loosening or tearing out window frames
- Emergency access or ventilation in buildings
- Forced opening of wooden or composite structures
- Post-disaster safety work

### Benefits

#### Robust, ergonomic and efficient

- Riveted key handle: excellent grip and impact resistance
- Wide profile for direct grip on frames
- Balanced weight for a controlled, straightforward movement
- Can be used with or without gloves
