

Gorgui rake with wooden handle

Specialized tool for vegetation fires

Distributed by **MMF Protection et Sécurité** this **Gorgui-type forestry rake** is an essential tool for vegetation fire-fighting teams. Thanks to its sharp triangular tines and robust design, it rakes, cuts and scrapes the ground to create effective fire barriers.

Its effectiveness is based on its ability to remove combustible material from the ground (leaves, branches, grass), work the surface layers and clear access routes. It is particularly well-suited to areas of dense vegetation, uneven terrain or areas inaccessible to mechanical equipment.

Technical data

Technical details

Type	Gorgui rake - special for forest fires
Head	Hardened steel with 4 sharpened triangular teeth
Handle	Standard length 5~132 cm), wooden
Functions	Firestopping, undergrowth clearance, scraping, post-fire cleaning
Fastening	Reinforced riveted head for intensive use

Field applications

Designed for forest firefighters

This Gorgui-type rake is a standard piece of hand-held equipment for fighting wildland fires. It can be used to open fire lines, secure perimeters, create firebreak trenches or for post-extinguishing clean-up.

Its ergonomic design enables long, precise and efficient work, even in difficult terrain such as dense forests, rocky or gullied areas.

Operational benefits

- Robust equipment, proven in extreme conditions
- Versatility: cutting, raking, cleaning
- Sharp teeth for maximum efficiency
- Long handle for better leverage and posture
- Easily transportable, without external power supply
