

Anti-whiplash strap for fire hose

Anti-whiplash safety strap for hydraulic hoses

Reinforce the safety of your hydraulic installations with this **retaining strap** designed to contain the whiplash effect caused by hose rupture under pressure. This device limits violent projections towards people or equipment, by keeping the part uncoupled over a short distance.

Designed for demanding environments

This safety strap is designed for professionals in the following sectors:

- Heavy industry and maintenance
- Public works and civil engineering
- Railways and transport
- Civil security and emergency response
- Fire departments and fire departments

Lightweight, versatile and easy to install

- **Material:** flexible, non-abrasive polyester
- **Quick to install:** no additional accessories required (no clamps, chains, clips, etc.)
- **Versatility:** a single part number covers several hose diameters

This system reduces the risk of accidents in the field, while simplifying the logistical management of your equipment.
