

Sternal harness for Peli™ bent lamp

The **Peli™ bent-lamp sternal harness**, offered by **MMF Protection et Sécurité**, the Peli™ Sternal Harness for Angled Flashlight allows you to **securely attach** your flashlight **to the front** while keeping your **hands free**. Specially designed for maintenance services, workers at heights, **firefighters**, this ergonomic harness optimizes mobility and visibility during operations in dark or smoky environments.

Compatible with **Peli™ bent lamps**, this harness adapts to the user's morphology thanks to **adjustable straps** at torso and shoulder level. The sternal support ensures **stable attachment** of the lamp by a magnet, even when moving, and allows **optimum orientation of the light beam**.

Its **magnetic quick-release fastener** allows the lamp to be removed or attached in seconds, which is crucial in emergency situations. Made from resistant, flexible and comfortable materials, it is suitable for prolonged wear with or without protective equipment (PPE, fire jacket...).

Technical specifications

- Compatible with: Peli™ [3415ZO](#) and [3410PL](#) bent lamps and equivalent models
- Mounting: rigid sternal forehead support with quick-release fastener
- Adjustment: adjustable shoulder and torso straps
- Wearing: hands-free, stable and comfortable
- Weight: lightweight, designed for intensive use
- Materials: resistant technical textiles, high-strength buckle, magnet
- Color: black
- Usage: indoor/outdoor, with intervention suit

Areas of use

Ideal for **firefighters**, fire safety officers, technical rescue teams and personnel working in confined spaces. This harness guarantees **optimum visibility without constraint**, even during prolonged operations, with immediate access to the lamp.
