

Power cable for Peli™ 9600 light head

Description

Distributed by **MMF Protection et Sécurité**, this 14 m power cable is designed for the Peli™ 9600 modular lighting system. It can be used to power a single LED head or to connect several modules together from a single socket, simplifying deployment in the field and optimizing linear lighting during operations.

Perfect for maintenance missions, this cable makes it easy to extend lighting coverage in complex situations (tunnels, high-rise buildings, underground parking lots, disaster zones). Its standard length offers installation flexibility and secure positioning of lighting heads without compromising the power supply.

Technical specifications

- Total length: 14 m
- NEMA 110 V plug / Peli™ 9600-compatible socket
- LED heads can be daisy-chained to create continuous lighting
- Compatible only with Peli™ 9600 modular system

Areas of use

This cable is specifically designed for industrial maintenance crews and firefighters to provide reliable, continuous lighting during emergency response. Ideal for route marking, area lighting in long-distance intervention or confined environments.
