

Manikin Sani-enfant for CPR training

Manikin pediatric RCP practical and hygienic

Distributed by **MMF Protection et Sécurité**, the **Sani-enfant** model offers a simple, reliable solution for teaching CPR to children. Lightweight and durable, it enables realistic training thanks to visible anatomical landmarks such as the sternum, ribcage and substernal incisure.

The breathing system consists of a disposable facepiece and lung, inserted in seconds. Thanks to this disposable system, no cleaning or disinfection is required between sessions: simply replace the single-use mouthpiece.

Key features for CPR training

The manikin simulates the opening of the airway only when the head is correctly tilted, and shows a visible rise in the chest during inhalation. This enables realistic training in ventilation and compression, with immediate visual feedback of successful insufflations.

Technical specifications

- Disposable breathing system (face shield / single-use lung)
- Dimensions: approx. 43 × 28 × 20 cm
- Approximate weight: 2.3 kg
- Anatomical landmarks: sternum, ribcage, substernal incisure
- Airway opening dependent on correct head tilt
- Visible thoracic lift with each successful insufflation
- Entirely latex-free
- 3-year warranty

Areas of use

The manikin **Sani-enfant** is ideal for training healthcare professionals, firefighters, first-aiders and civilian instructors. It is particularly suitable for teaching pediatric CPR in first-aid schools, examinations or refresher sessions.
