Manikin Sani-baby for CPR training

Manikin Compact, hygienic pediatric RCP

Distributed by **MMF Protection et Sécurité**the manikin **Sani-bébé** is designed to teach infant CPR. It faithfully simulates a baby's physiology with a realistic chest, including anatomical landmarks such as the sternum, rib cage and substernal notch, essential for accurate chest compressions.

Each learner uses a single-use breathing bag (face shield/lung), guaranteeing impeccable hygiene without internal cleaning of manikin. Visual feedback of chest lift allows you to check the effectiveness of insufflations.

Realistic functions adapted to infant CPR

The manikin reproduces the visible chest rise for each successful ventilation. Airway opening only works if the head is correctly tilted, thus respecting the technical gesture essential for infant CPR. This realism encourages rapid acquisition of the right reflexes.

Technical specifications

- Length of manikin: 52 cm
- Weight: approx. 0.98 kg
- Materials: flexible and semi-flexible PVC, polyethylene for the breathing bag
- Breathing system: disposable bag for each user
- Palpable anatomical landmarks: sternum, ribcage, substernal incisure
- Visual feedback: thorax lifted during insufflations
- Latex-free, reusable, 3-year warranty

Areas of use

The **Sani-bébé** is perfect for first-aid trainers, rescue teams, fire departments or healthcare establishments. It is particularly suited to group training sessions in first aid schools, training centers or rescue services, where high standards of hygiene are required.
