

Manikin basic Buddy CPR training for adults and children

Manikin Compact, hygienic and affordable RCP

Distributed by **MMF Protection et Sécurité** the **Basic Buddy** model offers an effective solution for ensuring that each student has his or her own manikin RCP, with no cross-contamination. Lightweight and easily transportable, it is suitable for both small and large group training sessions.

The lung-mouth system is fully disposable and replaceable, eliminating the need for cleaning after each use and limiting the risk of cross-contamination.

Educational features for CPR training

Airway opening is activated via the head-down-chin-up technique, and visible chest elevation signals successful insufflations. Palpable anatomical landmarks, notably the xiphoid process, guide hand positioning for precise, effective compressions.

Technical features

- Compression block adjustment: child or adult, depending on simulation needs
- Disposable breathing system: single-use lung bag
- Realistic visual feedback with thoracic elevation for each insufflation
- Palpable anatomical landmarks: sternum, ribcage, xiphoid incisure
- Lightweight, easy to assemble, transportable in included bag
- Standard contents: 1 manikin, 10 breathing bags, 1 installation tool, user manual.

Areas of use

The manikin **Basic Buddy** is perfect for first aid trainers, fire departments, training centers or schools. It is ideal for individual or group sessions to teach CPR hygienically and effectively.

Professional distribution

manikin is distributed by **MMF Protection et Sécurité** cPR training material for rescue services, schools and healthcare professionals.
