Manikin Adult Brad RCP with movable jaw

Manikin Brad with mandibular lift function

The manikin **Brad** is a robust, reliable model designed for teaching adult CPR with realistic simulation of the **movable jaw**. It enables the practice of mandibular lift without head tilt, an essential gesture for clearing the airway in intervention.

Perfect for training firefighters, first-aiders, healthcare professionals and teachers, Brad faithfully reproduces the conditions of adult cardiopulmonary resuscitation.

Optimum hygiene for intensive use

manikin features a disposable breathing system for each user, preventing cross-contamination. Its removable chest plate facilitates maintenance, and its durable vinyl structure with foam padding is designed for long-lasting, repeated use.

Technical features

- Movable jaw for mandibular lift training
- Disposable airways for individual use
- Resistant vinyl skin, foam padding
- Removable chest plate
- Accessories included: carrying bag, knee cushions
- Latex-free
- Weight: approx. 7 kg

Recommended applications

The manikin Brad is designed for adult CPR training by firefighters, rescue centers, healthcare institutions or

training organizations. It provides an accurate simulation for learning resuscitation techniques in complete safety.

Distributed by MMF Protection et Sécurité

Distributed by **MMF Protection et Sécurité**a specialist in first aid training equipment, manikin Brad provides professional training in cardiopulmonary resuscitation.
