

100 airway lungs for manikin Sani-Baby

Hygienic consumables for pediatric CPR training

Distributed by **MMF Protection et Sécurité** this pack of 100 units is compatible with manikin Sani-baby and ensures impeccable hygiene during cardiopulmonary resuscitation (CPR) training sessions. Each system (face shield + lung bag) is single-use, ensuring no cross-contamination between trainees.

Designed for safe, effective training

Disposable breathing systems are quick and easy to use: the device is fitted in seconds, and there's no need to clean or disinfect between sessions. Thoracic lift is visible with each insufflation, providing immediate feedback on the quality of gestures, essential for effective CPR training.

Technical specifications

- Packaging: 100 disposable systems (face shield + lung)
