

24 lungs airways for manikin infants

Hygienic breathing systems for infant CPR training

Distributed by **MMF Protection et Sécurité**, the **24-unit airway pack** is designed for safe, hygienic infant CPR training. Each system is single-use to avoid cross-contamination between trainees.

Compatibility and use

- Compatible with manikins infant Kim™ and Kevin™
- Packaged in lots of 24 disposable breathing systems

Pedagogical benefits

The use of disposable consumables guarantees safer, more effective training: the breathing bag can be replaced quickly, making it easier to sequence CPR sessions without intermediate disinfection. Ideal for first aid schools and training centers.

Life-saving training

This set is essential for life-saving training, particularly infant CPR. The systems prevent contamination between trainees, while providing visual feedback on insufflations performed.

Technical specifications

- Quantity: 24 units of disposable breathing bags
- Compatible: manikins infant Kim™ / Kevin™
- Use: hygienic infant CPR training
- Format: disposable, quick to replace between sessions

Recommended audience & applications

Suitable for CPR trainers, emergency services (fire department, first-aiders), first-aid training establishments or public awareness actions. Perfect for sessions with several learners, without compromising on hygiene.

Distribution MMF Protection et Sécurité

Professional training consumables, distributed by **MMF Protection et Sécurité**. Reliable supplies for training centers, associations or emergency services.
