

Manikin de soins KERI - Nursing skills training

A complete manikin for nursing training

The manikin KERi - Light version - offers realistic simulation of nursing gestures. It faithfully reproduces joint mobility, patient positioning and a full range of nursing procedures, with non-pinch joints for added safety and realism.

Natural mobility and realistic manipulation

With a full range of movement on all major joints, KERi enables patient positioning and transfers to be performed with ease, just like with a real patient.

Its contained weight of 12.7 kg and standard adult size of 148 cm make it easy to handle and deploy in the classroom or in mobile training situations.

Teaching over 35 technical skills

This manikin covers a broad curriculum of clinical practices: vital signs assessment, wound care, infusions, catheterization, ostomy care, tracheostomy care, gynecological examinations, enteral nutrition and transfer techniques.

Advanced and flexible hands-on training

The Light model includes generic anatomy not specific to age or gender, convertible male/female thanks to interchangeable accessories (male/female genital module).

It offers a high degree of pedagogical modularity for effective training in multi-disability care or personal care.

Technical specifications

- Weight: approx. 12.7 kg
- Size : manikin full adult 148 cm
