Photoluminescent head for Peli™3715Z0-3765Z0 lamps

Photoluminescent accessory for safe operations in the dark

Distributed by **MMF Protection et Sécurité**this photoluminescent head is an indispensable accessory for interventions in low-light environments: tunnels, smoke-filled areas, industrial sites, construction sites or confined spaces. It attaches easily to Peli™ 3715Z0 or 3765Z0 lamps to be visible even without power.

Essential functionality: enhanced visibility

Made from high-quality photoluminescent material, this head absorbs ambient light and restores it by emitting it in the dark. Even after the main beam has been switched off, the light ring remains visible, enabling you to find your light source quickly - an invaluable asset for fire-fighters, rescue services, maintenance crews or security guards.

Technical specifications

- Model: 3713-940-247E (photoluminescent head)
- Compatibility: Peli™3715 Zone 0 and 3765 Zone 0 headlamps
- Material: photoluminescent plastic - glows after exposure to light
- Function: makes it easy to locate the device in low- or no-light environments
- Installation: direct replacement of the original head, without complex tools

Recommended applications

This photoluminescent head is ideal for professionals wishing to optimize their intervention lighting in critical conditions. Suitable for use by fire-fighters, first-aiders, technicians in dark environments, or security guards, it guarantees visual traceability of lighting equipment when visibility is reduced.
