Thread protector 2? NPSH Male and female

Effective thread protection for firefighters

This **2? NPSH thread protector** prevents thread damage during transport, storage or on-site use. It protects both male and female fittings, avoiding loss of efficiency, leaks, or bad hook-ups that can slow down the action of firefighters.

Compatibility and robustness

Suitable for fire pumps with NPSH 2? threads, this accessory ensures universal compatibility with many standard fittings used in the emergency services. Made from hard-wearing materials, the protector resists impact, water splashes and mechanical wear.

Technical specifications

- Diameter: 2? NPSH male and female
- Type: thread protector - male and female use
- Materials: robust plastic or alloy suitable for wet and shock environments
- Function: protection against dust, dirt, shocks and impacts
- Use: transport, storage, deployment on fire sites

Recommended field applications

Indispensable for fire departments, fire departments, equipment depots or maintenance teams. Keeps threads in good condition, so that every fitting is reliable, leak-proof and ready for use in an emergency.
