

Conversion 1.5" Female NPSH to 1.5" Male BSP

Essential fitting for firefighting operations

Distributed by **MMF Protection et Sécurité** this adapter is designed for emergency situations where it is necessary to combine pipes, fittings or handheld nozzles whose threads are not directly compatible. It provides a reliable transition between a male BSP thread and a female NPSH thread, in accordance with international standards.

Reliability under pressure and compatibility

Manufactured from high-quality extruded metal, this adapter is resistant to erosion, corrosion and the mechanical stresses encountered during operations. It provides a secure, leak-tight connection with negligible backlash, minimizing flow losses - a critical factor in fire-fighting.

Technical specifications

- Male thread: 1.5" BSP (British Standard Pipe)
- Female thread: 1.5" NPSH (National Pipe Straight Hose)
- Type: extruded adapter (solid part, machined for durability)
- Material: corrosion- and impact-resistant metal
- Use: temporary or permanent connection in fire-fighting applications, connecting pipes or equipment with different threads

Fields of application

Suitable for fire departments, rescue centers, technical services, or any structure involved in a fire situation. Particularly useful for connections between hydraulic devices, handheld nozzles, attack or discharge hoses, in situations where every second and every liter counts.

Distributed by MMF Protection et Sécurité

This professional component is distributed by **MMF Protection et Sécurité** specialist equipment, guaranteeing conformity, reliability and availability of spare parts.
