

Conversion from 1" Female NH to 1" Female BSP

Highly compatible conversion parts for firefighting

At **MMF Protection et Sécurité** we offer this extruded conversion part to enable fire-fighting teams to quickly connect BSP threaded pipes or fittings with NFPA/NH fittings. This part ensures compatibility between different brands of equipment during on-site operations or emergency interventions.

Technical specifications

- Female thread: 1 BSP (British Standard Pipe)
- Male thread: 1 NH (National Hose / Standard Thread for fire)
- Material: extruded metal (corrosion-resistant alloy)
- Use: pipe to NH male thread / quick conversion
- Standards: used in standard fire-fighting equipment

Benefits for fire and rescue services

This conversion piece enables the connection of hoses or accessories from older equipment or from various brands, thus avoiding the impossibility of interconnection in emergency situations. When responding to a fire, every second counts: this part reduces assembly times and improves the reliability of the attack or discharge system.

Examples of use

- Connection of a hose with BSP thread to a male NH fitting on a hydrant or pump.
- Conversion between training and operational equipment.
- Assembling discharge/booster systems in sectors where standards vary.

Professional distribution MMF Protection et Sécurité

Reliable, compliant products sold by **MMF Protection et Sécurité** a specialist in fire-fighting equipment, ensuring quality, availability and technical advice for professionals and emergency services.
