

Bag with strap for 50 to 100 m guide line

Secure storage bag for guide lines

The **guide line bag** is an essential piece of equipment for organizing, protecting and transporting your guide lines when working in fire or confined spaces. Designed to withstand the most demanding operational conditions, it combines practicality and sturdiness with rapid rope deployment in the field.

Key features

- **Reinforced fabric:** PVC-coated polyester weave for extra strength
- **Retroreflective tape:** improved visibility in low-light conditions
- **45 mm polyester webbing:** high strength and carrying comfort
- **Rope routing:** protected leather exit to limit wear and tear
- **Ventilation:** mesh fabric on top to prevent dampness
- **Hanging ring:** quick attachment to equipment or vehicle
- **Labeling space:** clear identification of equipment
- **Zipper closure:** quick and secure

Versions

The bag is available in two versions to suit your needs:

- **50-60 m** guide line bag
- **100 m** guide line bag)

An **adjustable carrying strap (included)** allows the bag to be carried on the shoulder or across the body. The bag can also be worn directly on the belt, thanks to an integrated strap.

Ease of use

Rope storage is simplified thanks to a "zig-zag" system for smooth deployment during operations. The snap hook sewn into the bottom of the bag ensures reliable, long-lasting attachment.

Operational applications

This bag is designed to meet the needs of **firefighters**, tunnel rescue teams, IGH teams and, more generally, professionals working in confined or smoke-filled environments. It guarantees **safe transport** and **rapid implementation** of guide lines in the field.

Distribution MMF Protection et Sécurité

Made in France, the guide line bag is available from **MMF Protection et Sécurité** a specialist in fire-fighting and rescue equipment.
