ATEX Zone marking kit - 4 yellow/black cones + 4 Skippers with ribbon

A complete marking kit for ATEX zones

The **ATEX zone marking kit** is designed to quickly set up a safe perimeter around a work area, a construction site, a confined area or a danger zone. Comprising **4 yellow and black traffic cones** and **4 yellow/black Skipper tape reels**, this kit meets the needs of demanding environments where safety and visual signage are paramount.

Yellow and black traffic cone presentation

The flexible yellow PVC traffic cone with black base creates clear, effective signage. With its **75 cm height** and 4.5 kg weight, it offers stability and visibility, even in difficult conditions. Its black weighted base, molded in one piece with the cone, ensures sturdiness and durability. Designed to accommodate a **Skipper reel**, it makes it easy to form a secure perimeter using marker tape.

Technical specifications of the traffic cone

- Color: yellow with two black stripes
- Height: 75 cm
- Weight: 4.5 kg
- Material: flexible recycled PVC
- Weighted black base, inseparable from the cone
- Compatible with lighting reels and accessories

Advantages of the yellow/black cone

Made from recycled PVC, the cone is sturdy, ecological and practical. It can be combined with illuminated signage accessories (LED batons, flashing lights) or with roll-up beacon tape. This modularity guarantees optimum signage and a safety perimeter that can be adapted to suit the situation.

A modular beaconing system with Skipper

Each cone can be fitted with a **yellow/black Skipper reel** that releases a high-visibility marking tape. The

combination of cones and Skippers can be used to create an enclosed zone, delimit a work area or secure a sensitive area, particularly in ATEX environments where rigorous signage is essential.

Applications

This beaconing kit is ideal for construction sites, industrial zones, warehouses, ATEX-rated sites, as well as for fire departments and emergency services wishing to quickly secure a perimeter. Its sturdiness and modularity make it an essential piece of equipment for any organization needing to manage hazardous areas.
