WICK F200 2-stage pump without motor and connection

A high-performance pump for fire and critical applications

The **F200 pump** is an essential piece of equipment for fire-fighters, rescue services or demanding industrial installations. Thanks to its sealed bearing, it requires little maintenance, while offering enhanced fluidity and durability even after long periods of continuous use.

Reliability and robustness for emergency applications

This pump ensures sufficient flow with stable pressure, necessary to feed handheld nozzles or provide effective overpressure. The sealed bearing protects sensitive parts from dirt, dust and splashing water, guaranteeing optimal operation in severe conditions.

Estimated technical data

- Type: Centrifugal or fire pump
- Bearing: sealed for reduced maintenance
- Use: fire fighting, pressure boosting, supply handheld nozzle
- Construction: impact- and corrosion-resistant materials
- Installation: fixed or mobile use, depending on version

Applications

This pump is ideally suited to fire-fighting operations, tanker trucks, fire distribution stations, industrial buildings, storage facilities or security installations where reliability and availability are essential.

Professional distribution by MMF Protection et Sécurité

The F200 pump complete with sealed bearing is distributed by **MMF Protection et Sécurité**your specialist partner for fire safety equipment. Benefit from a dedicated service, technical support and spare parts to guarantee the continuity of your operations.
