

Rainbird sprinkler kit for fire protection

Ready-to-use Rainbird kit for protecting homes against forest fires

This **Rainbird sprinkler kit** is designed to create a water barrier around homes and limit the spread of forest fires. Thanks to its lightweight, hard-wearing **Myti-Flo fire hose**, it enables rapid deployment and effective water distribution in all conditions. The NH/NST water stealer ensures simple, reliable connection to the existing network.

Kit technical specifications

- **Rainbird sprinkler:** robust, calibrated head for even distribution
- **Forest fire hose:** 4.6 m long, lightweight and durable
- **NH/NST water stealer:** standard connection for rapid installation
- UV-, heat- and corrosion-resistant materials

Recommended applications

This kit is specially designed to **protect homes against forest fires**. It can be used to water facades, roofs and surrounding areas to reduce the risk of fire spreading. Used by private individuals, farmers or managers of sensitive sites, it represents an active and accessible defense solution.
