

Mobile Beaconing and Signalling Unit - 4 cones and 4 Skipper ribbons

Mobile beaconing cart: efficiency and mobility

This device is designed for emergency and response services: the mechanically-welded steel cart, 60×20 tubular structure with anti-corrosion treatment, ensures robustness in the field. RAL3000 red epoxy paint, Ø 30 cm solid wheels with polypropylene rims and rubber tires, load capacity 200 kg per wheel.

Complete composition and integrated equipment

- Signaling and maintenance cart in corrosion-resistant steel
- Pre-riveted cone base for easy stacking
- 4 Lübeck cones 75 cm, 4 Skipper roll-up marker tapes
- Optimized storage for easy transport and quick set-up
- Empty weight: 25 kg, width 54 cm, length 60 cm

Why use a Mobile Beaconing and Signalling Unit (UMBS)?

The **Mobile Beaconing and Signalling Unit (UMBS)** is an essential piece of equipment for rapidly securing an intervention zone. Versatile and immediately operational, it can **protect workers** and **alert users** during emergency events, worksites, rescue operations or public works.

Essential equipment for risk zone management

With its integrated traffic cones, marking tapes and lighting devices, the UMBS guarantees **optimum day/night visibility**, and enables you to **create a secure perimeter in a matter of seconds**. It's an essential tool for preventing accidents, channelling traffic flows and maintaining safe working conditions on public highways,

industrial sites or sensitive areas.

Designed for professionals in the field

Developed for **firefighters, rescue teams, technical services, roadworks, maintenance companies** and industrial site managers, the UMBS ensures **fast, compliant and effective beaconing**, even in emergency conditions. Its robust, maneuverable and optimized cart enables **instant deployment of the equipment**.

Operational applications

- Securing accident and fire perimeters
- Marking out worksites or hazardous areas
- Protection of personnel and the public
- Emergency signalling on roads or industrial sites
- Night-time operations with light signals

The UMBS is the reference tool for any organization wishing to **intervene quickly, mark out effectively and protect** its teams and users **over the long term**.
