

Manikin heavy-duty rescue - LSPCC training

Manikin for LSPCC operational training

manikins rescue equipment is used for rescue training at height, in confined spaces, or for the implementation of the **LSPCC** - Lot de Sauvetage et de Protection Contre les Chutes (Fall Protection and Rescue Package). This essential piece of firefighting equipment enables the safe lowering, lifting and freeing of victims. The manikin faithfully reproduces the size, weight and mobility of a human victim, guaranteeing complete, realistic training.

What are LSPCC maneuvers?

The **LSPCC** (Lot de Sauvetage et de Protection Contre les Chutes) is a set of ropes, karabiners, lanyards and pulleys used by firefighters to ensure safety during rescue operations or difficult access. LSPCC maneuvers involve **evacuating or securing a victim or responder** in high-risk situations: roofs, shafts, trenches, stricken buildings or vertical environments. The manikin rescue system enables these techniques to be performed in complete safety, and improves team coordination.

manikin features

- Highly resistant seams and fabrics for intensive use
- Flexible internal structure simulates the behavior of a human body
- Realistic weights: 25 kg, 50 kg and 70 kg depending on model
- Sizes available: 140 cm, 160 cm and 170 cm
- Balanced weight distribution for natural lifting and carrying

- Resistant to repeated pulling, dropping and handling

Versions available

- **Manikin 25 kg** - Size 140 cm: ideal for beginners and light training courses
- **Manikin 50 kg** - Size 160 cm: intermediate version for advanced exercises
- **Manikin 70 kg** - Size 170 cm: manikin adult for full LSPCC maneuvers

Applications and use

These manikins are designed for **training firefighters, SSIAP agents, rescue teams and LSPCC instructors**. They are used for lifting maneuvers, vertical evacuation, confined space rescue or victim extraction. Their robustness makes them ideal for intensive use in the field or at training centers.

Distribution MMF Protection et Sécurité

manikins heavy-duty rescue equipment is distributed by **MMF Protection et Sécurité** a specialist in fire and rescue training equipment. Reliable, durable and in line with fire and rescue service requirements, they guarantee realistic and safe training.
