

Spotlight PELI™ RALS 9730

Powerful stand-alone lighting for demanding environments

The **Peli 9730 RALS** is specially designed for professionals in industry, emergency services, civil security, law enforcement and defense. It provides effective illumination of **temporary work areas, command posts, isolated construction sites** or **night-time intervention sites**, without relying on an external power supply.

Thanks to its **built-in rechargeable lead battery**, the 9730 RALS is a reliable alternative to thermal generator systems, offering a **silent, emission-free** and immediately operational solution.

Light performance and long runtime

4,800 lumens for optimum visibility

With a light output of **4,800 lumens**, the Peli 9730 RALS provides wide, even illumination, perfectly suited to operations requiring maximum visibility. This performance represents a significant advance over previous generations of RALS systems.

Over 13 hours of continuous operating time

Designed for long missions, the 9730 RALS offers **over 13 hours of continuous operation** on a rechargeable lead-acid battery. This endurance enables extended operations to be secured without interruption, while reducing the logistical constraints associated with fuel supply.

Mobile design, ergonomic and quick to deploy

Weighing just **8.3 kg**, the Peli 9730 RALS is **almost 20% lighter** than previous models, making it easy to transport and deploy. Its compact design enables rapid deployment by a single operator, even in difficult conditions.

Removable light head and flexible configurations

The light head of the 9730 RALS is **removable** and can be mounted on a variety of supports, including **tripods**, to adapt light coverage to field constraints. This modularity enhances operational efficiency in all situations.

Ground-oriented safety lighting

A **ground-oriented rear light** improves immediate visibility around the system. This feature enhances operator safety and reduces the risk of falls in dark or cluttered environments.

Robustness and reliability for intensive professional use

The Peli 9730 RALS is designed to withstand the toughest conditions. Its robust design and **IPX4 protection rating** guarantee excellent resistance to water and harsh environments, both indoors and out.

It is also **CE** and **RoHS** certified, attesting to its compliance with European requirements for safety, environmental compatibility and sustainability.

Peli 9730 RALS applications

- Lighting for industrial sites and maintenance operations
- Emergency and civil protection services
- Temporary command posts
- Security and law enforcement operations
- Military and defense missions
- Technical inspections and isolated areas

Why choose the Peli™ 9730 RALS?

- High-power self-contained lighting system

- 4,800 lumens for extended visibility
- 3 power levels: low / medium / high
- Over 13 hours of rechargeable battery life
- Graduated runtime indicator
- Silent solution, with no fuel or emissions
- Compact, lightweight, easy-to-transport design
- Recognized reliability and robustness of the Peli brand

The **Peli™ 9730 RALS** has established itself as a benchmark **self-contained professional lighting** solution for all contexts where safety, light performance and reliability are essential criteria.
