

Fire hydrant plug with lock and chain DN65 DN100

Fire hydrant plug with lock and chain in aluminum

The **DN65 fire hydrant plug with lock and chain** is designed to effectively secure side hydrants on fire hydrants. Made from **sturdy aluminum**, it offers excellent resistance to corrosion and external stress, while guaranteeing fast, easy handling.

This model is available in **DN65 for side hydrants**, and also in **DN100 for central hydrants**, to adapt to different hydrant configurations.

DN65 plug for hydrant side inlets

The **DN65** model is specifically designed for hydrant side inlets. It provides effective protection against intrusion, soiling and damage, while guaranteeing rapid access in the event of an emergency.

Key features

- Nominal diameter: **DN65**
- Version available: **DN100 for central water intake**
- Material: **aluminum**
- Integrated locking system
- **Safety chain** to prevent loss of plug
- Square **30 mm**

Compatible with 30 mm square fire hydrant key

The **30 mm square** allows the use of a **standard fire hydrant key**, especially the federal type. This compatibility guarantees rapid opening and closing during maintenance operations or fire service interventions.

The locking system provides additional protection against unauthorized tampering, further enhancing plant safety.

DN100 version for central water inlets

In addition to the DN65 model for side outlets, this plug is also available in **DN100** for central hydrants. This variation enables different types of hydrants to be fitted, while maintaining the same high standards of quality,

robustness and safety.

Advantages of the aluminum fire hydrant plug

Resistance and durability

Aluminum offers excellent resistance to weathering, corrosion and demanding outdoor environments, ensuring a long product life.

Optimum security

Thanks to the integrated lock and retaining chain, the plug remains firmly attached to the fire hydrant, reducing the risk of loss or theft.

Compliance with professional standards

Adapted to fire defense networks, this plug meets the requirements of local authorities, water system operators and fire safety professionals.

Why choose this DN65 fire hydrant plug?

Choosing this **DN65 plug with lock and chain** guarantees protection and security for fire hydrant outlets, while ensuring perfect compatibility with standard 30 mm square keys. The DN100 version allows complete adaptation to different hydraulic installations.

A reliable, long-lasting solution tailored to the requirements of fire safety infrastructures.
