Manikin tEE-UU CRASH - Junior rescue simulation

The **TEE-UU CRASH JUNIOR** is a manikin training device specially designed for simulating interventions involving children. It enables fire and rescue teams to train for realistic pediatric care situations.

The ideal complement to manikin CRASH & CARRY, it can be used to reproduce a variety of scenarios involving adults and children, for comprehensive, operational training.

Realistic simulation adapted to pediatric interventions

- Self-gripping zones for injury simulation
- Compatible with accident scenarios involving children
- Simulation of a wide range of traumas
- Training in specific first-aid techniques

Flexible, educational design

- Adjustable weight depending on filling material
- Customizable filling to adapt exercises
- Quick set-up of training scenarios

Sturdiness and durability

- High-strength 1680D TEC Polyester fabric
- Highly durable PVC inner lining
- Reinforced seams for intensive use

Professional applications

- Firefighter training
- Pediatric first aid training
- Child accident simulations
- Rescue and evacuation exercises

Technical specifications

Specifications	Values
Type	Manikin child training
Dimensions (W x H x D)	50 x 110 x 17 cm
Weight (without filling)	? 0.75 kg
Material	1680D TEC Polyester with PVC coating
Simulation zones	Hook-and-loop fasteners
Color	Black
Application	Pediatric fire and rescue training

Scope of delivery

- Manikin CRASH JUNIOR (unfilled)
- Access to downloadable injury simulations

MMF expertise

Distributed by MMF, this manikin training package is designed to meet the requirements of fire and rescue professionals, particularly for training involving pediatric victims.
