Injury simulation kit TEE-UU CRASH JUNIOR - 24 realistic scenarios

The **TEE-UU APPLICATION OF INJURY** kit **for CRASH JUNIOR** is a set of injury simulations designed to enhance rescue training involving pediatric victims. It reproduces realistic emergency situations to enhance teams' operational readiness.

Comprising 24 laminated elements representing different types of injury, the kit offers a wide variety of teaching scenarios adapted to interventions involving children.

Realistic, educational simulation

- 24 realistic injury elements (23 different scenarios)
- Detailed illustrations for optimum realism
- Suitable for fire and rescue training
- Ideal for exercises involving child victims

Easy to use in the field

- Quick fastening with hook-and-loop fasteners
- Immediate installation on manikin CRASH JUNIOR
- Pre-cut elements for precise positioning
- Easy identification thanks to marking on back

Durability and reusability

- Resistant, watertight laminated supports
- Reusable for multiple training sessions
- High-quality printing (4 colors)

Professional applications

- Firefighter training
- Pediatric first aid training
- Accident and emergency simulations
- Realistic training exercises

Technical specifications

Features	Values
Type	Injury simulation kit
Compatibility	CRASH JUNIOR Training Dummy
Number of items	24 pieces (23 simulations)
Max. dimensions	Format up to DIN A4
Total weight	? 1 kg
Thickness	0.125 mm
Material	Waterproof laminate support
Fastening	Hook-and-loop fasteners

Scope of delivery

- 24 injury simulations
- Storage pouch

MMF expertise

Distributed by MMF, this simulation kit complements fire and rescue training equipment for realistic and effective training, particularly in pediatric settings.
