# Peli 1730 waterproof carrying case

## A case adapted to the constraints of intensive transport

The Peli **1730** has been designed to meet the needs of professionals faced with repeated handling and frequent movement of equipment.

In logistics or industrial environments, transporting equipment involves more than just protection: it also implies **resistance to repeated shocks, vibrations and external conditions**.

## Robust design for heavy loads

Thanks to its reinforced structure, the **Peli 1730 waterproof case** can carry heavy loads without compromising the safety of the equipment.

It absorbs the stresses of intensive travel while maintaining **waterproof and dustproof protection (IP67**), essential in uncontrolled environments.

## A reliable solution for field operations and logistics

Whether for on-site operations, transport between different locations or temporary storage, this **professional transport case** offers a reliable and durable solution.

It is ideal for users who are looking for a **case that can keep pace with field operations**, without degrading performance over time.

## Frequently asked questions

### Is the Peli 1730 suitable for frequent, intensive transport?

Yes, it is designed to withstand repeated handling, shock and vibration, making it particularly suitable for logistical environments and regular travel.

### Why choose a case like the 1730 for heavy equipment?

It offers an essential combination of **structural strength and waterproof protection**, making it ideal for securing equipment subjected to heavy loads during transport.
