Peli 1750 waterproof carrying case

A long format designed for specific equipment

The Peli **1750** has been designed to meet the requirements of transporting**long** or difficult-to-pack**equipment**. Its format enables equipment to be properly aligned, thus limiting stress or internal displacement during handling.

This configuration is particularly well-suited to professionals needing a **carrying case** capable of accommodating oversized equipment while guaranteeing a high level of protection.

Effective protection against external conditions

The **waterproof case** is a real barrier against the elements. It protects contents from **moisture**, **dust** and splashes, while limiting the impact of travel.

This protection is essential to preserve the integrity of **sensitive equipment**, particularly during prolonged transport or use in harsh environments.

A solution adapted to professional use

The **Peli 1750** can be easily integrated into contexts where equipment is regularly on the move: **logistics**, **industry**, maintenance or outside operations. It secures equipment without complicating its handling.

It meets the needs of professionals looking for a reliable solution for the **secure transport** and **storage** of technical equipment.

Ergonomics designed for the field

Despite its size, this **case for bulky equipment** remains practical to use. It makes it easy to move around, while ensuring a good grip, which is essential for repeated use.

Its design ensures continuity between equipment protection and comfort of use, even in demanding conditions.

Is this case suitable for frequent travel?

Yes, it is designed for regular use, guaranteeing **constant protection** of equipment, even during repeated transport.

What kind of equipment can it carry?

It's ideal for **long technical equipment**, specific tools or any **equipment requiring stable support** along its entire length.
