Peli 1780 waterproof carrying case

A waterproof case designed for large volumes

The Peli **1780 waterproof case** stands out for its ability to accommodate bulky or multiple items of equipment in the same space. It allows you to organize your equipment in a more structured way, while limiting the constraints associated with transporting large loads.

This type of configuration is particularly suitable when several items need to be grouped together and protected in a single container.

Protection adapted to field requirements

Designed for professional use, this **carrying case** effectively protects the contents against **humidity**, **dust** and handling impacts. It helps maintain equipment integrity, even in difficult conditions.

It therefore meets the needs of professionals looking for a reliable solution to secure their equipment when on the move or in storage.

A practical solution for equipment management

Thanks to its large volume, the **Peli 1780** facilitates the centralization of equipment. It reduces the number of containers required, simplifying logistics and improving overall equipment organization.

This is essential in environments where fast, clear access to equipment is key.

Designed to handle heavy loads

Despite its capacity, this **large-volume case** is ideal for use in the field. It enables equipment to be moved with minimum handling effort, while maintaining a high level of safety.

It offers a balance between robustness, capacity and ease of use for professionals.

What kind of equipment can be transported in the Peli 1780?

It's ideal for **transporting bulky equipment**, technical equipment or several items that need to be grouped

together in a secure space.

In which contexts is this case most appropriate?

Suitable for **logistical**, **industrial** or intervention environments, where equipment management and protection are essential.
