Portable evacuation and transfer chair - 2 wheels

The **evacuation and transfer portable chair** is an essential piece of equipment for the safe transport of people with reduced mobility or who are unable to move about, particularly in medical environments, establishments open to the public and emergency situations. Designed to meet the requirements of security, rescue and medical professionals, it enables **rapid, controlled and safe evacuation** in confined spaces.

With a **load capacity of up to 159 kg**, this evacuation chair is a reliable solution for transferring patients or casualties, particularly on stairs, in narrow corridors or in hard-to-reach areas. Its robust, ergonomic design guarantees efficient use in the field.

What is an evacuation carrying chair?

An evacuation **chair** is a transport device designed to move a person in a seated position under optimum safety conditions. Unlike a stretcher, it is particularly suited to confined environments and evacuations requiring excellent maneuverability.

2-wheel models are sought-after for their **ease of use**, **small footprint** and **efficiency during short transfers or rapid interventions**. They represent a practical solution for professionals needing reliable, easily mobilized equipment.

Differences from other transport devices

Several types of equipment can be used for evacuation and transfer, depending on the context:

The stretcher is designed for recumbent transport and provides optimum support, but requires more space and personnel.

The tracked evacuation chair facilitates descent down stairs, but is generally heavier and more complex to handle.

The 2-wheel ev acuation**chair** is **compact**, **quick to set up** and **easy to handle**. It's an excellent compromise for operations requiring responsiveness and maneuverability.

Technical specifications

- **Type:** evacuation and transfer portacabin chair
- **Load capacity:** 159 kg
- **Configuration:** 2 wheels
- **Color:** orange
- **Medical device :** class I
- **Marking:** CE
- **Sterile:** no
- **Warranty:** 12 months

Dimensions and weight

- **Unit packed dimensions:** width 98 cm x length 56 cm x height 16 cm
- **Packaged unit weight:** 10 kg
- **Dimensions of bare product:** width 52 cm x length 84 cm x height 92 cm
- **Bare product weight:** 9 kg

Thanks to its **compact dimensions** and **controlled weight**, this carrying chair is ideal for environments where space, rapid deployment and easy storage are essential criteria.

Operational benefits

- **High maneuverability** in confined spaces
- **Rapid deployment** in emergency situations
- **Safe transport** of people
- **Robust structure** for professional use
- **Small footprint** for easy storage

Fields of application

The Evacuation Rack Chair is particularly suitable for professionals working in the following sectors:

- **Hospitals, clinics and healthcare establishments**
- **EHPAD and nursing homes**
- **Establishments open to the public**
- **Industry and high-risk sites**
- **Emergency services, security and evacuation**

Product conformity and identification

- **Customs code:** 94029000

An essential evacuation solution

In a context where personal safety is a priority, the **Evacuation Rack Chair** is an essential piece of equipment for the rapid, safe transfer of people in difficulty. Its design meets the operational constraints of professionals, while

facilitating interventions in hard-to-reach areas.

MMF expertise at the service of professionals

MMF offers a selection of equipment dedicated to **safety, evacuation and personnel transfer**, chosen for their reliability, conformity and suitability to field requirements. This portable chair is part of a global offer designed for professionals in the medical, security, industrial and public-access sectors.

By choosing MMF, users benefit from a rigorous technical offer and solutions adapted to real operating constraints, with a clear objective: to **ensure the safety of people and facilitate evacuation operations**.
