Evacuation and transfer trolley - 4 wheels

The **4-wheel evacuation and transfer chair** is an essential piece of equipment for safely moving people with reduced mobility or in emergency situations. Designed for demanding environments such as healthcare establishments, ERP, industrial sites or transport infrastructures, it enables rapid, ergonomic and safe transfer.

Thanks to its robust design and **load capacity of up to 159 kg**, this evacuation chair meets the operational requirements of rescue, medical and security professionals. Its optimized structure facilitates maneuvering, even in confined spaces or during emergency evacuations.

How an evacuation carrier chair works and what it's used for

The evacuation carrying chair enables **a seated person to be transported** safely and stably, particularly on stairs, in narrow corridors or in areas that are difficult to access with a conventional stretcher. Unlike manual carrying solutions, it reduces the risk of injury to personnel and improves the comfort of the person being transported.

Equipped with **4 wheels**, it ensures excellent mobility on flat surfaces, facilitating rapid movement within buildings. Its ergonomic design makes it easy to handle, and helps distribute loads evenly during transport.

Technical specifications

- **Type:** evacuation and transfer portable chair
- **Medical device :** Class I
- **Marking:** CE
- **Sterile:** no
- **Load capacity :** 159 kg
- **Mobility :** 4 wheels
- **Structure:** sturdy, high-strength frame
- **Color:** high-visibility orange
- **Warranty:** 12 months
- **Customs code:** 94029000

Dimensions and weight

- **Product dimensions (folded or packaged) :**
  Width : 10 cm - Length : 64 cm - Height : 20 cm - Weight : 16 kg
- **Product dimensions in use :**
  Width : 60 cm - Length : 84 cm - Height : 98 cm - Weight : 14 kg

Storage conditions

- **Minimum temperature:** not specified
- **Maximum temperature :** not specified
- **Minimum humidity :** not specified
- **Maximum humidity:** not specified

Operational benefits

- **Fast, fluid movement** thanks to 4 wheels
- **Reduced physical effort** for operators
- **Patient safety** during transport
- **Adapted to constrained environments** (stairs, narrow passages)
- **High visibility** for rapid identification in emergency situations

Fields of application

- Healthcare facilities (hospitals, clinics, nursing homes)
- Fire safety and emergency evacuation
- Industry and high-risk sites
- Transport (railways, airports)
- Buildings open to the public (ERP)

Why use a carrying chair rather than a stretcher?

Unlike **stretchers**, carrying chairs are specifically designed for **confined spaces and vertical movement**. It is easier to maneuver on stairs, and reduces the constraints associated with carrying several operators.

It is thus an essential complementary solution in any evacuation and emergency management strategy.

A complete range of evacuation equipment with MMF

MMF offers a complete range of equipment dedicated to**evacuation, rescue and personnel transport**, to meet the requirements of medical, security and industrial professionals.

The aim is to provide reliable solutions that comply with current standards and are adapted to the constraints of the field, with a **global offering that covers all intervention and safety needs**.

MMF expertise and support

Thanks to its technical expertise, MMF helps its customers choose the equipment best suited to their operational constraints. Each product is selected for its **reliability, sturdiness and relevance in real-life conditions**.

In this way, the Evacuation Rack Chair is part of a global approach to **personal safety, effective intervention and optimization of operational resources**.
