Epoxy-coated red stretcher cabinet for folding stretchers

A stretcher cabinet for storing emergency equipment

The**stretcher cabinet** is designed to store a **stretcher in** a dedicated, visible and quickly accessible space. It enables emergency equipment to be kept in a precise location, so that it can be easily identified and available in the event of an emergency.

With its dimensions of **253 x 27 x 25 cm**, this cabinet is ideal for stretcher storage, while taking up little space in**immobilization and transport** areas. Suitable for professional sites, local authorities, ERP, emergency rooms, industrial zones or areas requiring clear organization of emergency equipment.

Red epoxy finish for rapid identification

The **red epoxy paint** finish makes the cabinet easy to identify in a professional environment. This finish facilitates the identification of **emergency equipment** and helps to integrate the equipment into an area dedicated to interventions, first aid or the transport of people.

The cabinet features a **simple hook-and-loop fastener**, designed to keep the door closed while allowing rapid opening when the stretcher needs to be used. This simple, practical system allows direct access to equipment when needed.

A practical solution for organizing an emergency stretcher

This storage cabinet protects the stretcher from unnecessary handling, dust and clutter associated with storage in a non-dedicated space. It helps keep the stretcher clean, organized and available, especially in environments where rapid access to equipment is essential.

Sturdy, visible and functional, this **stretcher cabinet** meets the needs of professionals wishing to structure their**immobilization and transport** equipment in a clear, secure and easily identifiable location.
