

Headlamp PELI™2740 LED first generation refurbished

The **reconditioned first-generation Peli 2740 LED headlamp** is designed to provide simple, practical and reliable lighting when working, travelling or working in poorly lit areas. Its **soft rubber** design makes it comfortable to wear and easy to adapt to field use.

This reconditioned model is an interesting way of acquiring a professional headlamp at reduced cost. The lamp is offered in tested operating condition, but is sold **without batteries**.

Two lighting modes to suit your needs

The **35 lumen high** mode offers a beam range of up to **32 m**, useful for moving around, inspecting an area or working with better visibility. The **13 lumen low** mode favors autonomy, with a runtime of up to **51 h**.

Its **IPX4** water resistance means it can be used outdoors or in environments exposed to splashes. Available in two colors: **blue** and **white**.

A reconditioned, flexible and compact headlamp

- work requiring hands-free lighting;
- maintenance, inspection or occasional work ;
- travel in poorly lit environments;
- auxiliary equipment for workshop, vehicle or intervention bag;
- outdoor use with possible exposure to splashes.

FAQ - Refurbished first-generation Peli 2740 LED headlamp

What does "reconditioned" mean for this headlamp?

This headlamp is considered **reconditioned** because the original batteries were removed before sale. It has no particular scratches and is offered in controlled functional condition, with packaging suitable for sale without batteries.

When is low mode useful?

Low mode is useful when the aim is to extend runtime rather than to obtain maximum power. With **13 lumens** and up to **51 h** of runtime, it's ideal for close work, short trips or situations where moderate light is sufficient.

Is this lamp suitable for outdoor use?

Yes, its **IPX4** rating means it can be used in splashes or light rain. However, it remains a water-resistant lamp, not a waterproof model designed for immersion.
