CaPper chat for CPR training

The Cat CaPper for CPR training is a manikin veterinary training device designed for learning and practicing cardiopulmonary resuscitation techniques on cats. It provides realistic, progressive and structured training in vital emergency techniques in veterinary medicine and animal first aid.

manikin reproduces the main stages of feline CPR: chest compressions, insufflations and manual control of the femoral pulse. It offers practical training, adapted to emergency situations encountered in veterinary clinics, training centers or in the field.

Designed for repeated educational use, it is suitable for veterinary schools, simulation centers, veterinary clinics and animal first aid training organizations. The **100 replacement airways supplied** enable several training sessions to be organized under hygienic conditions.

Training benefits

manikin enhances the quality of feline CPR training by providing real-life situations. It helps learners to develop precise, appropriate responses to vital cat emergencies.

It promotes structured, progressive and reproducible learning, suitable for both students and animal health professionals.

Features

- Manikin realistic, educational feline CPR training
- Simulation of chest compressions and insufflations
- Manual control of femoral pulse possible
- 100 alternative airways included
- Designed for repeated training
- Easy to use in a supervised training environment
- Designed for veterinary and animal first aid training

Pedagogical benefits

- **Realistic training** in cat emergency procedures
- **Structured learning** of compressions, insufflations and vital controls
- **Easy hygiene** thanks to replaceable airways
- **Repeated use** suitable for training centers and veterinary schools

- **Practical teaching aids** to reinforce the right reflexes in emergency situations
- **Progressive training** for students, vets, ASVs and trainers

Applications

- Feline cardiopulmonary resuscitation training
- Teaching emergency procedures in veterinary schools
- Training veterinary surgeons and veterinary auxiliaries
- Simulation of emergency situations in animal first aid
- Teaching tool for animal health trainers

FAQ

What can I do with manikin?

It allows you to practice chest compressions, insufflations and manual control of the femoral pulse, in order to reproduce the main stages of emergency care.

Are the airways replaceable?

Yes, manikin is supplied with **100 replacement airways**. This makes it easy to organize repeated training sessions under hygienic conditions.

Who can use manikin?

It is suitable for veterinary schools, veterinary clinics, simulation centers and animal first-aid training organizations wishing to teach or perfect feline CPR techniques.
