Manikin KERI adult care

The KERi™ Nursing manikin is a full-body adult manikin designed for patient care training. It supports training programs for nurses, nursing assistants, and educational tracks related to long-term care, with two versions available: **Standard** for routine care, and **Complete**for more advanced procedures.

Thanks to its **realistic range of motion**, natural positioning, and **non-pinching joints**, it allows students to practice handling, hygiene care, positioning, and transfers under optimal educational conditions.

Uses

- Basic nursing training;
- learning hygiene care, bed baths, and changing clothes;
- training in dressing changes, wound care, and intramuscular injections;
- training in ostomy and tracheostomy care;
- learning patient positioning and transfer techniques;
- advanced scenarios with the Complete version: urinary catheterization, gastrostomy, enemas, and nasogastric tubes;
- instruction in schools, simulation centers, healthcare facilities, or training organizations.

FAQ – KERi™ Standard or Complete Nursing Manikin.

Which model should I choose: Standard or Complete?

The **Standard** version is suitable if the training focuses primarily on routine care: hygiene, dressings, injections, ostomy care, tracheostomy care, positioning, and patient transfer. The **Complete**version is more suitable if the program also includes technical procedures such as urinary catheterization, gastrostomy, enemas, or nasogastric tube insertion.

Can this manikin cover multiple training levels?

Yes. It can be used for introductory training in basic care, and then for more technical exercises depending on the

selected configuration. The Complete version allows for further expansion of scenarios without increasing the number of training materials.

Is it suitable for repeated use in training centers?

Yes. Its realistic range of motion, non-pinching joints, and lightweight design facilitate repeated exercises in positioning, transfer, hygiene, and technical care.

Is an additional carrying case required?

Yes. The carrying case is not included. It must be purchased separately if the “ manikin ” needs to be moved regularly between multiple training rooms or sites.
