

Manikin Standard KERI Adult Care

manikin manikin The **KERi™ Basic nursing manikin** is a full-body adult training manikin designed for teaching basic patient care. It supports training programs for nurses, nursing assistants, and long-term care professionals, allowing learners to practice common procedures in a structured and safe environment.

This manikin allows for the practice of numerous skills: patient hygiene, bed baths, changing clothes, dressing changes, wound care, intramuscular injections, positioning, transfers, ostomy care, tracheostomy care, and oral and nasal care. It provides a comprehensive educational foundation for developing the professional reflexes necessary for the daily care of a patient.

Thanks to its **realistic range of motion**, natural positioning, and **non-pinching joints**, the manikin facilitates repeated handling during training sessions. Its lightweight design allows for practical use in classrooms, simulation centers, healthcare facilities, or training organizations.

Benefits for Training

manikin improves the quality of nursing education by providing a tangible tool for learning technical and interpersonal skills. It helps students practice progressively before applying these skills with real patients.

It promotes consistent learning, suitable for instructor demonstrations, individual exercises, and group simulations.

Features

- Manikin Full-body adult manikin for nursing training
- Life-size adult: approximately 147 cm
- Lightweight design: approximately 12.7 kg
- Realistic range of motion
- Non-pinching joints for educational handling
- Natural patient positioning
- General female appearance
- Can be converted to a male appearance by removing the wig and attaching male genitalia
- Training in visual inspection: moles, stage 1 sacral ulcer, dilated or constricted pupils, red skin folds

- Training in routine care: hygiene, dressings, injections, ostomy care, tracheostomy, positioning, and transfer
- Carrying case not included

Educational benefits

- **Comprehensive training** in basic care skills and routine procedures
- **Realistic handling** thanks to range of motion and natural positioning
- **Safe for training** with non-pinching joints
- **Versatile for use** in hygiene care, dressing changes, injections, and specialized care
- **Suitable** for schools, training centers, healthcare facilities, and nursing assistant programs
- **Progressive learning** to reinforce skills before real-world practice

Applications

- basic nursing training;
- training in hygiene care and bed baths;
- training in dressing changes and wound care;
- training in intramuscular injections in the arm, thigh, and buttock;
- training in patient positioning and transfer techniques;
- training in ostomy and tracheostomy care;
- instruction in schools, simulation centers, healthcare facilities, or training organizations.

FAQ

What is the KERi™ Standard nursing care s manikin e used for?

It is used to train learners in basic patient care: hygiene, dressings, intramuscular injections, positioning, transfers, ostomy care, tracheostomy care, and daily care procedures.

Is this man manikin suitable for beginner training?

Yes, it is suitable for both initial training and more advanced practice. It allows students to gradually practice technical skills before performing them on actual patients.

What procedures can be practiced with this sim manikin?

It allows you to practice bed baths, changing clothes, oral and nasal care, dressing changes, intramuscular injections, ostomy care, tracheostomy care, positioning, and transfer techniques.

Why are non-pinching joints important?

Non-pinching joints facilitate repeated handling during training and reduce the risk of pinching when positioning the manikin or performing transfer exercises.

Is the carrying case included?

No, so it must be purchased separately if the man manikin e needs to be transported regularly.
