

Peli Air 1646 Waterproof Carry Case

A large-format PELI Air case for long and bulky equipment

The **PELI Air 1646** is a professional transport case designed to meet the needs of users who need to protect equipment that is long, bulky, or difficult to organize in a standard case.

Its **long and deep** design allows for the transport of technical, industrial, audiovisual, or operational equipment requiring significant interior volume, while maintaining the renowned protection of the [PELI](#) Air line.

PELI Air technology: lighter weight, same level of protection

The PELI Air 1646 case features the ultra-lightweight design unique to the Air line. Its patented HPX²™ polymer reduces the case's weight while ensuring excellent resistance to the rigors of professional transport.

This design is particularly advantageous for bulky equipment: it minimizes the case's empty weight while maintaining reliable protection against impacts, dust, water, and repeated handling.

A Long/Deep design for hard-to-fit equipment

The PELI Air 1646 is part of the **Long/Deep** series, developed to provide protection tailored to equipment requiring both length and depth.

This format allows for the storage of large or structured equipment without having to force it into a case that is too small. It is particularly suitable for professionals transporting multiple pieces of equipment, bulky accessories, or sensitive equipment requiring precise securing.

A waterproof, durable case designed for demanding environments

IP67 and **MIL-SPEC** certified, the PELI Air 1646 case effectively protects equipment against water, dust, impacts, and the stresses of business travel.

It features all the essential elements expected in a professional protective case: **Press and Pull™ latches**, a **watertight O-ring seal**, an **automatic pressure-equalizing valve**, stainless steel padlock guards, and a business card holder.

Easy transport despite its large size

Despite its large size, the PELI Air 1646 is designed to make travel easier. Its **quiet stainless steel ball-bearing wheels** and **retractable carrying handle** make it easier to move the case during field assignments, logistics transport, or business travel.

Its foldable overmolded handle also improves grip during handling, loading, or unloading.

A solution tailored for sensitive professional equipment

The PELI Air 1646 can be used to transport technical, audiovisual, industrial, electronic, medical, or operational equipment. Its large interior volume allows for the organization of bulky equipment while ensuring its protection during transport.

Depending on the configuration chosen, it can be used empty or with foam inserts to customize the fit to the equipment being transported and minimize movement inside the case.

Frequently Asked Questions About the PELI Air 1646 Case

What is the PELI Air 1646 used for?

The PELI Air 1646 is suitable for transporting long, bulky, or sensitive professional equipment: technical equipment, audiovisual equipment, specialized tools, industrial devices, operational accessories, or equipment requiring a large interior volume.

What makes the PELI Air 1646 unique?

Its unique feature is its **Long/Deep** format, which combines length and depth. It is therefore suitable for equipment that is difficult to fit into a standard transport case.
