Typhon 100 N Foam Life Jacket

Typhon 100 N Life Jacket for Professional Use

The **Typhon 100 N life jacket** is safety equipment designed to protect users in marine or river environments or near bodies of water. Thanks to its permanent foam buoyancy, it provides immediate protection without the need for a mechanical trigger or inflation system.

Simple to use, durable, and easy to put on, the Typhon 100 N is particularly well-suited to the needs of **professionals, local governments, emergency services, and technical teams** seeking reliable equipment to ensure safety during their operations.

Permanent buoyancy for immediate safety

Unlike inflatable **life** jackets that require a gas cartridge and an activation system, the **100 N foam life jacket** provides permanent buoyancy. The user receives immediate support as soon as they enter the water.

This design reduces maintenance requirements and ensures the equipment is always ready for use—a significant advantage for shared equipment or repeated use.

Why choose a 100-Newton life jacket?

A **100 N life jacket** provides buoyancy suitable for professional activities near bodies of water and for situations requiring simple, effective, and readily available equipment.

The Typhon 100 N combines safety, comfort, and ease of use to meet the needs of users who regularly wear personal flotation devices.

Technical Specifications of the Typhon 100 N

- **Type:** foam life jacket
- **Buoyancy:** 100 Newtons
- **Principle:** permanent buoyancy without inflation
- **Use:** professional, group, and water sports
- **Design:** Sturdy for regular use
- **Maintenance:** minimal compared to inflatable models
- **Purpose:** personal protection against the risk of falling into the water

Sizes available at MMF

To ensure a proper fit for every user, MMF offers the **Typhon 100 N life jacket** in several sizes:

- **Size M:** users weighing 50 to 70 kg
- **Size L:** for users weighing 70 to 90 kg

Choosing the correct size is essential to ensure the life jacket stays securely in place and remains effective in the event of an accidental fall into the water.

Applications

The **Typhon 100 N life jacket** meets the needs of professionals working in environments where the risk of falling into the water must be managed:

- Emergency services and civil protection
- Local governments and technical services
- Work along rivers, reservoirs, or in port areas
- Maintenance of hydraulic structures
- Industries near bodies of water
- Onboard safety equipment

Difference between a 100 N foam life jacket and an inflatable life jacket

The **foam life jacket** prioritizes simplicity and immediate availability. It requires no activation and remains operational at all times, making it a suitable solution for shared equipment or frequent use.

An inflatable life jacket offers a compact design for extended wear but requires regular maintenance of the activation system and gas cartridge.

MMF: Safety Solutions for Water-Based Operations

MMF offers a selection of equipment designed for professionals exposed to risks associated with working near water. With its range of **life jackets, flotation vests, and personal protective equipment for water-based activities**, MMF supports rescue services, industry, and local governments in ensuring the safety of their operations.
