Pink Pediatric Dual-Head Stethoscope - Ideal+ Holtex

A pediatric stethoscope for auscultation of children

The **pediatric double-head stethoscope is** a medical device intended for healthcare professionals, healthcare facilities, training institutions, or departments requiring auscultation equipment suitable for children.

Thanks to its **pediatric design**, it is better suited for use with young patients than an adult model.

Dual metal chestpieces and comfort

This model is equipped with **dual metal chestpieces**, designed to meet the needs of routine pediatric auscultation. Its **cold-protection ring** helps minimize discomfort upon skin contact—an important consideration when examining a child.

The aluminum yoke, integrated into the tubing, ensures a comfortable grip. The chestpiece, which matches the color of the tube, also makes it easy to quickly identify the stethoscope among other medical equipment.

A simple, practical, and easily identifiable stethoscope

With its pink color, the **Ideal+ pediatric dual-head stethoscope** is suitable for daily medical use, healthcare settings, or educational training needs. It combines a functional design with a clear and easily recognizable appearance.

This stethoscope comes with **a pair of ear tips** and fits easily into a professional medical kit.
